

How to Collect Urine Sample at Home

1. Empty the regular litter from your cat's litter box and clean the box with mild detergent.
*Alternatively you can use a new litterbox – a basic one from Walmart or even the Dollarama will do.
2. Pour the Kit for Kat (the provided litter) into the clean litterbox.
**For multiple cat households, the cat providing the sample should be kept apart until the sample can be collected.
3. Once your cat has urinated, collect the sample with the syringe provided and place it in a tightly sealed container. Please label this container with your pet's name, your name, and the time it was collected.

Additional Information

- 🐾 Morning samples or those collected overnight are preferred.
- 🐾 For best results sample should be brought into the clinic **within 20- 30 minutes of collection**
- 🐾 If you are unable to bring in the sample within 30 minutes of collection, place the sample in the refrigerator and bring in as soon as possible as after 12 hours the sample can no longer be used for diagnostic purposes.
- 🐾 Samples can be submitted **Monday-Friday between 9am-5pm**
