**Feline Neuter Discharge Instructions**

**07-05-24**

**Zeus**

Your feline has just been neutered. This surgical procedure consists of the complete removal of both testicles.

Once you get Zeus home you should remember:

- Your pet may still be a little groggy for up to 24 hours after the anesthetic. It is important to remember to watch them closely around stairs or any other areas where they may injure themselves. Try not to prevent jumping around.
- Tonight only feed 1/2 of the normal volume of food. Anesthesia can slow the movement of food in the digestive tract and cause an upset stomach. Tomorrow regular feeding patterns & amounts are fine.
- Please limit all excessive exercise for 10-14 days or until the surgery recheck appointment. The incision area should be kept clean & dry.
- You must check the incision daily until the surgery recheck appointment.
- Please ensure that your pet receives all meds as they have been directed.
- **Prevent any licking** of the incision by using an E-collar or some other device.
- Surgery recheck is free of charge in 10-14 days. There were no sutures placed. Please give us a call to book that appointment.

If you have any questions or concerns, please do not hesitate to call us as soon as possible.

And please notify us immediately if you notice any of the following:

- Your pet is licking their incision excessively and there is redness or discharge noticed.
- If your pet has persistent vomiting or diarrhea
- If your pet refuses to eat after the first day or becomes depressed.
- If you have any other questions or concerns..

**Thank you for allowing us to care for Zeus.**

**If you have any concerns after hours please contact the Animal Emergency Clinic at 905-576-3031**

I full understand the discharge instructions provided by Herongate Animal Hospital.
